

INVITATION TO CCIT SEMINAR

Monday, December 12th, at 14.00

SPEAKER

Cécile Gouttefangeas
PhD
University of Tübingen
Interfaculty Institute for Cell Biology
Department of Immunology
Auf der Morgenstelle 15
72076 Tübingen
Germany

Title

**"Towards personalization of multi-peptide
vaccination against cancer:
the Tübingen experience"**

Place

Auditorium 53K2C
Herlev University Hospital
Herlev Ringvej 75
2730 Herlev

We welcome you all to this exciting seminar !

Per thor Straten
Director

CENTER FOR CANCER IMMUNOTHERAPY

Towards personalization of multi-peptide vaccination against cancer: the Tübingen experience

Cécile Gouttefangeas

The Department of Immunology in Tübingen, has a long-lasting interest in the interaction of human tumors with immune cells; this includes the identification of the specific immunopeptidome presented by malignant cells. Based on this work, two generations of anti-cancer vaccines with increasing personalization will be presented, along with immunomonitoring results and clinical follow up. To enhance the immunogenicity and efficacy of our vaccines and identify relevant combinations, we also work on understanding the properties of tumor infiltrating T cells and on the development and combinations of adjuvant substances.
