

Invitation to the inaugural conference of IMMUNONET

Cancer immunotherapy is an increasing interdisciplinary research discipline, involving researcher from basic medical research, clinical and translational research, and bioinformatics. The newly established cancer immunotherapy research network, IMMUNONET, cordially invites you to the inaugural meeting, where we will discuss the future of cancer immunotherapy research in Denmark. The meeting will feature talks by key national researchers within each of the three research disciplines, as well as a keynote address by Prof. Catherine Wu from Dana-Farber Cancer Institute. We strongly encourage anyone with an interest in cancer immunotherapy, regardless of background, to join in establishing the future direction for interdisciplinary collaboration in cancer immunotherapy.

Participation is free of charge
